Support and Fallback Record

Documentation checked: November 6, 2026

1. clip-path

Purpose: Creates a decorative clipping shape on the feature image.

MDN documentation:
https://developer.mozilla.org/en-US/docs/Web/CSS/Reference/Properties/clip-path

Browser support: MDN identifies this feature as widely available across modern browsers.

Fallback: If clip-path is unsupported or disabled, the image displays using its normal rectangular shape.

Test: Temporarily disable the clip-path enhancement and verify that the image remains visible and readable.

2. shape-outside

Purpose: Allows article text to wrap around the circular portrait.

MDN documentation:
https://developer.mozilla.org/en-US/docs/Web/CSS/Reference/Properties/shape-outside

Browser support: MDN identifies this feature as widely available across modern browsers.

Fallback: Without CSS Shapes support, text returns to normal rectangular wrapping around the floated image, or the image returns to normal document flow.

Test: Disable the shape-outside enhancement and verify that text remains readable and does not overlap the portrait.

3. shape-margin

Purpose: Adds spacing between the portrait's shape and surrounding text.

MDN documentation:
https://developer.mozilla.org/en-US/docs/Web/CSS/Reference/Properties/shape-margin

Browser support: MDN identifies this feature as widely available across modern browsers.

Fallback: Without this property, the browser uses the normal float and margin behavior.

4. Stacking contexts and z-index

Purpose: Controls the visual order of overlapping elements.

MDN documentation:
https://developer.mozilla.org/en-US/docs/Web/CSS/Guides/Positioned_layout/Stacking_context

Implementation: The project uses a documented layer scale:

- Base: 0
- Raised: 1
- Sticky: 2
- Badge: 3

Fallback: Elements without an explicit stacking level participate in the browser's normal painting order.

Test: Inspect layered elements in Chrome DevTools and verify their positioning, z-index values, visibility, and pointer accessibility.

Test Record

1. Responsive layout tests

Viewport	Result	Observation
320px	Pass	The page changes to a narrow, single-column layout. The title and story guide remain readable.
768px	Pass	The layout adjusts for the medium viewport. The story guide and article remain organized without visible overlap.
1280px	Pass	The desktop layout displays the story guide beside the main article.

2. Accessibility and content tests

Test	Result	Observation
200% zoom	Pass	The page remains readable at increased zoom.
Keyboard focus	Pass	A visible focus outline appears around the focused story navigation link.
CSS disabled	Pass	The page content remains available in a readable document flow, including the headings, navigation links, images, and paragraphs.
Doubled paragraph	Pass	Additional paragraph content remains in the normal document flow without visibly covering surrounding content.

3. CSS enhancement and fallback tests

Test	Result	Observation
clip-path disabled	Pass	The feature image remains visible when the clipping enhancement is removed.
shape-outside disabled	Pass	The page content remains readable without the text-wrapping enhancement. The fallback preserves normal text flow.

4. HTML and CSS validation

- HTML: Nu HTML Checker reported no errors or warnings.
- CSS: W3C CSS Validator reported no errors and one warning.

5. Positioning, Interaction, and Stacking Tests

Test	Result	Observation
Sticky navigation — start	Pass	The story guide appears beside the article in its starting position.
Sticky navigation — scrolling	Pass	The story guide remains visible in its sticky position while the article scrolls.

Sticky navigation — container boundary	Pass	The story guide stops at the end of its containing layout instead of remaining fixed over the rest of the page.
Pointer activation	Pass	The navigation links can be accessed using the mouse pointer.
Header badge stacking	Pass	The header badge uses absolute positioning within the header's relative containing block.
Sticky guide stacking	Pass	The sticky story guide uses its assigned stacking layer to remain visible while scrolling.
Pull-quote overlap stacking	Pass	The pull quote uses relative positioning and a raised stacking layer to create a controlled overlap without hiding surrounding content.

Asset and Content Attribution

Visual assets: The feature.svg and portrait.svg illustrations were created specifically for this project with AI assistance. They are original SVG graphics and were edited by me.

Quoted material: The pull quote is attributed to Tim Sweeney, founder and CEO of Epic Games. The attribution shown in the project identifies the source as his conversation with Lex Fridman on Lex Fridman Podcast #467 (2025). The quote is:

> “I'm most impressed with the games that have created what appears to be a full, living, breathing world.”

External resources: MDN Web Docs and the W3C CSS Validator were used as technical references for CSS positioning, clipping, text wrapping, and validation. These resources are credited in the project documentation.

AI disclosure

ChatGPT was used to generate the written content for the main page of the website, including the feature story about the evolution of video games. AI assistance was also used for HTML and CSS development, troubleshooting, responsive layout improvements, and project documentation.
